

LIAM VAN

678-488-7259 | liamvanpj@gmail.com | Seattle, WA | linkedin.com/in/liam-van | github.com/SpeciLiam | liamvan.dev

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, SQL, C++, C#, PHP, C

Backend / APIs: REST APIs, Spring Boot, Node.js, NestJS, application APIs, distributed caching, service validation

Product / Data: React, Vite, Postgres, MySQL, OpenSearch, Supabase, data modeling, fintech-adjacent workflows

Cloud / Reliability: AWS, GCP, OCI, Docker, CI/CD, Grafana, Sentry, canary validation, release support, on-call response

Testing / Collaboration: Robot Framework, Selenium, unit testing, debugging, code reviews, documentation, stakeholder updates

EXPERIENCE

Oracle

May 2025 - Present

Software Engineer, GCP Integration (Oasis)

Seattle, WA

- Own GA readiness for OCI databases on GCP, validating BaseDB, ADBS, Exadata, backup, restore, and API workflows
- Debug cross-cloud integration issues with Oracle and GCP engineers, driving canary triage and release-blocker fixes
- Built AI-assisted API tests for Oasis services with prompt design, Robot Framework, onboarding docs, and auth parsing
- Created reusable GCloud and OCI scripts plus regression utilities for cloud data-service validation and team reuse
- Implemented Exascale Storage Vault dry-run support, improving preflight validation with over 90% unit coverage
- Serve as primary release on-call, leading Sev2 investigations with log analysis, Grafana/T2 metrics, and alarm tuning

Oracle

May 2024 - August 2024

Software Engineer

Redwood City, CA

- Built an LLM-powered recommendation service for Oracle University and OCI learning content discovery
- Integrated video search into Oracle University's search experience using OpenSearch indexing and retrieval pipelines
- Implemented React and NestJS product surfaces with PHP and SQL metadata flows for search and recommendation UX

Caterpillar Inc.

May 2023 - December 2023

Software Engineer Intern

Chicago, IL

- Built Java data-processing workflows that converted JSON to Apache Parquet and improved storage efficiency by 30%
- Developed APIs and data models for equipment telemetry, cutting analysis time by 50%
- Implemented distributed caching for real-time search across API responses, increasing parsing speed by 1000%
- Supported API validation, documentation, and release-quality checks across telemetry and search workflows

Caterpillar Inc.

May 2022 - August 2022

Software Engineer Intern

Chicago, IL

EDUCATION

University of Georgia, School of Computing

Athens, GA

Bachelor of Science in Computer Science, GPA: 3.9

Dec 2024

PROJECTS

Fantasy Wizard | *React, TypeScript, Spring Boot, Postgres, AI, REST APIs*

- Built an AI advisor that turns live Sleeper, ESPN, and Yahoo data into roster, draft, waiver, and trade insights
- Designed Spring Boot provider adapters for account linking, ESPN draft hydration, Caffeine caching, and capability gating
- Deployed the Vite frontend and Railway backend with Postgres-backed saved league/provider connections

SplitCheck | *React, Vite, Supabase, Postgres, AI*

- Built a receipt-splitting app with AI parsing, deterministic split calculation, guest updates, and payment status flows
- Added realtime host refresh with edit-safe debouncing and fallback polling to protect in-progress user edits
