

LIAM VAN

678-488-7259 | liamvanpj@gmail.com | Seattle, WA | linkedin.com/in/liam-van | github.com/SpeciLiam | liamvan.dev

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL, C++, C#, PHP, C

Frontend / Product: React, Vite, Node.js, NestJS, Angular, customer-facing systems, AI-assisted workflows

Backend / Data: REST APIs, Spring Boot, Postgres, Supabase, MySQL, OpenSearch, data modeling, distributed caching

Systems / Reliability: AWS, GCP, OCI, Docker, CI/CD, Grafana, Sentry, canary validation, release support

Testing / Collaboration: Robot Framework, Selenium, unit testing, prompt design, code reviews, technical documentation

EXPERIENCE

Oracle May 2025 - Present
Software Engineer, GCP Integration (Oasis) Seattle, WA

- Own GA readiness for OCI databases on GCP, validating BaseDB, ADBS, Exadata, backup, restore, and API workflows
- Debug distributed cross-cloud issues with Oracle and GCP engineers, driving canary triage and release-blocker fixes
- Built AI-assisted API tests for Oasis services with prompt design, Robot Framework, onboarding docs, and auth parsing
- Created reusable GCloud and OCI scripts plus regression utilities for data-service release validation and team reuse
- Implemented Exascale Storage Vault dry-run support, improving preflight validation with over 90% unit coverage
- Serve as primary release on-call, leading Sev2 investigations with log analysis, Grafana/T2 metrics, and alarm tuning

Oracle May 2024 - August 2024
Software Engineer Redwood City, CA

- Built an LLM-powered recommendation service for Oracle University and OCI learning content discovery
- Integrated video search into Oracle University's search experience using OpenSearch indexing and retrieval pipelines
- Implemented React and NestJS product surfaces with PHP and SQL metadata flows for search and recommendation UX

Caterpillar Inc. May 2023 - December 2023
Software Engineer Intern Chicago, IL

- Built Java data-processing workflows that converted JSON to Apache Parquet and improved storage efficiency by 30%
- Developed API and data-modeling flows for equipment telemetry, cutting analysis time by 50%
- Implemented distributed caching for real-time search across API responses, increasing parsing speed by 1000%
- Supported API validation and release-quality checks across telemetry and search workflows

Caterpillar Inc. May 2022 - August 2022
Software Engineer Intern Chicago, IL

EDUCATION

University of Georgia, School of Computing Athens, GA
Bachelor of Science in Computer Science, GPA: 3.9 Dec 2024

PROJECTS

Fantasy Wizard | *React, TypeScript, Spring Boot, AI, REST APIs*

- Built full-stack AI advisor features that turn live Sleeper, ESPN, and Yahoo data into roster and draft insights
- Designed Spring Boot provider flows for account linking, draft hydration, Caffeine caching, and capability gating
- Deployed a Vite frontend and Java backend with Postgres-backed saved league and provider connections

SplitCheck | *React, Vite, Supabase, Postgres, AI*

- Built a mobile-first receipt app with AI parsing, guest claim links, realtime refresh, and edit-safe fallback polling
